ResolveAI

The AI teammate that closes the loop on every stuck rupee.

An autonomous customer-service teammate for Paytm merchants and customers. It diagnoses, decides, acts across systems, verifies the money moved, and hands off to humans only when it should.

1.57 Cr
storefronts with Paytm devices*

₹7.1 L Cr
merchant GMV in Q1 FY27*

1 owner
per case, from complaint to confirmed closure

PROBLEM STATEMENT

When money gets stuck, five systems and three teams get involved. The merchant just waits.

A MORNING AT A BENGALURU DARSHINI

Manjunath was paid. His soundbox stayed silent.

A customer shows a ₹480 debit. Manjunath sees nothing, and the breakfast queue keeps growing. Support tells him to raise a ticket and wait for a callback. He asks again the next day, and the day after.

WHERE A STUCK PAYMENT CAN HIDE

LEDGER › BANK / PSP › NPCI UDIR › SETTLEMENT › KYC / RISK

PAIN 1

Swivel-chair resolution

5+ tools per root cause. Bots explain policy, then hand off.

PAIN 2

Repeat contacts, silent deadlines

No updates, so users re-ask. Dispute windows close silently.

Why now: NPCI has made UPI chargeback handling automated and timing-driven, and RBI sets outer-limit TATs for failed transactions. Speed and traceability are now compliance, not a nice-to-have.

THE GAP & OUR USP

Everyone helps. Nobody finishes.

TODAY · FAQ BOT

Answers, then hands off

- ✖ Explains refund policy and TAT
- ✖ Can't read live ledger state
- ✖ Can't trigger a refund or ticket
- ✖ Ends with "please raise a request"

Deflects a question, not a problem

TODAY · HUMAN AGENT

Acts, but slowly

- ✖ Can fix it across systems
- ✖ 5+ tabs, manual lookups
- ✖ One case at a time, shift-bound
- ✖ Evidence gathered by hand

Accurate, but doesn't scale to crores

USP · RESOLVEAI TEAMMATE

Owns the outcome

- ✓ **Closes, not replies.** The case stays open until the money has moved.
- ✓ **Proactive.** Acts on stuck-payment events before a complaint exists.
- ✓ **Policy-bounded.** The LLM proposes; a rules engine approves, caps or blocks.
- ✓ **Ready handoffs.** Root cause, steps and evidence in one case file.
- ✓ **Bharat-native.** Kannada, Hindi and Hinglish voice notes.

PROPOSED SOLUTION

ResolveAI owns the case from first signal to confirmed closure.

01
Detect
Watches payment, settlement and dispute events

02
Diagnose
Correlates ledger, bank and UDIR to find the root cause

03
Decide
Proposes next action; policy engine checks limits

04
Act
Tickets, refunds, hold releases, dispute evidence

05
Verify & close
Confirms money moved, tells the user, logs it

WORKFLOW A

Failed payment
Debited, not credited: trace it, promise an exact time, verify the reversal.

WORKFLOW B

Settlement hold
Find the blocker (KYC, risk flag, bank mismatch), fix it or explain it.

WORKFLOW C

Dispute
Pull QR, device and timestamp logs; file the evidence before the deadline.

ESCALATION Humans get a **case file**: root cause, steps taken, evidence, recommended action. No re-asking the customer.

HOW IT BEHAVES

Bounded autonomy: the model proposes, policy decides.

L0 **Inform**
Read-only answers from live state

L1 **Act within limits**
Low-value, reversible, auto-approved

L2 **Act with approval**
Higher value: one-click human confirm

L3 **Escalate**
Fraud signals, ambiguity, angry user

Every action is logged and explainable, and reversible where the rail allows.

ILLUSTRATIVE FLOW · WORKFLOW A

Manjunath's ₹480, resolved in minutes

0:00	Kannada voice note on WhatsApp: **"customer pay maadidru, soundbox enu helilla."**
0:03	Matches the payment. **Debit confirmed, credit pending** at the beneficiary bank.
0:05	Checks UDIR status and TAT rules. **Within window, reversal is due.**
0:08	L1: raises a bank ticket, sets a watcher, tells Manjunath **the exact time**, in Kannada.
0:09	Sends the payer a status update so the queue stays calm.
T+1	**Verifies the money landed**, closes the case, asks for a one-tap rating.

TECHNOLOGY / TECH STACK

Built as an agent with hard guardrails, not a chat wrapper.

1 · HEAR

Input

WhatsApp, in-app, IVR, soundbox. Sarvam ASR, PII redaction.

2 · PLAN

Reason

Claude with tool use. RAG on SOPs, NPCI and RBI circulars.

3 · CHECK

Policy

Deterministic policy engine: tier limits, L1 / L2 / L3 routing.

4 · ACT

Tools

MCP-style tools: ledger, settlement, UDIR, KYC, CRM.

5 · VERIFY

Confirm

Re-reads state; if not fixed, loops to Plan. Sarvam TTS reply.

UNDERNEATH EVERY STEP

The spine

Event stream for proactive detection, case memory, approval queue, immutable audit log.

LEARNS SAFELY

Test before it acts

Replay harness on past tickets, shadow mode, golden-case evals before any new action goes live.

Plugs into Paytm's existing support stack and ticketing. We add the agent layer, not another CRM.

TRUST & SAFETY

What could go wrong, and how we stop it.

RISK	GUARDRAIL
1 **Wrong money action**	L1 covers only low-value, reversible actions. Anything bigger waits in the approval queue.
2 **Hallucinated diagnosis**	No action without tool-confirmed facts. The verifier checks the ledger, not the model's claim.
3 **Fraud or social engineering**	Risk flags force L3. Never acts on a user's word alone, never changes payout accounts.
4 **Customer data exposure**	PII redacted before the model sees it. Role-scoped tool access, full audit trail.
5 **Missed regulatory TAT**	Deadline watchers on every case. Escalates with the case file well before the window closes.
6 **Model or tool outage**	Fails safe to the human queue with the case file attached. No half-finished actions.

IMPACT & BENEFITS

Measured on outcomes, proved in shadow mode.

TARGET

60–70%

Auto-resolved

in-scope tickets, no human touch

TARGET

Minutes

Time to resolve

not days, for simple failed payments

TARGET

-40%

Repeat contacts

via proactive, exact-time updates

TARGET

Zero

Missed dispute deadlines

evidence filed automatically

MERCHANTS

Know when money lands

Help in their own language, any hour. Fewer lost disputes.

CUSTOMERS

Clear status, no chasing

Refunds verified, not just promised.

PAYTM TEAMS

Focus on complex cases

Lower cost-to-serve. Full audit trail for compliance.

All four numbers are targets, to be validated against Paytm's baseline in a 30-day shadow pilot. North star: cases closed without human touch, with CSAT at or above the human baseline.

BUSINESS MODEL

Pays for itself on cost, earns on retention and recovery.

1. **Lower cost-to-serve**
   Scales without linear headcount.

2. **Merchant retention**
   Protects device subscriptions and payment volume.

3. **Recovered revenue**
   More disputes won, failed payments completed.

4. **Consent-based growth**
   Relevant offers at moments of trust, never pushy.

5. **Productise later**
   Per-resolved-case pricing for banks, PSPs, fintechs.

ILLUSTRATIVE UNIT ECONOMICS

Saving = tickets × auto-resolve rate × cost gap

In-scope tickets / month (assumed)	10,00,000
Auto-resolve rate (pilot target)	60%
Human cost / ticket (assumed)	₹45
ResolveAI cost / ticket (assumed)	₹4

₹2.46 Cr / month
before retention and recovery upside

ROADMAP & ASK

Earn trust in stages: shadow, assist, act.

DAYS 0-30

Shadow mode

Workflow A on live events, no actions. Compare with human outcomes, tune the policy engine.

DAYS 30-60

Assisted

Case files and drafts for agents, one-click L2 approvals, regional-language voice.

DAYS 60-90

Autonomous L1

Auto-resolve low-risk cases. Add settlement and dispute flows.

WHAT WE'RE ASKING PAYTM FOR

Sandbox APIs

Ledger, settlement, UDIR and ticketing test access

Anonymised tickets

Resolved cases to build our golden eval set

Shadow pilot

30 days on Workflow A with Bengaluru merchants

An ops mentor

A support lead to set policy limits with us

ResolveAI

Not a chatbot. A **teammate** that gets the job done.
